

Week 4

Grade & Section	Teacher	Subject	Planning Period (From -To dates)	Number of Sessions	Chapter No. and Name
5	Ms Gayathri & Ms Naveena	Maths	26.10.2026 to 31.10.2026	5	Chapter 6,Decimals

Day	Main Concepts	Sub Concepts	Learning Outcome(s)	Cognitive Level (for each LO)	Formative assessment tasks planned	Teaching methodology & Activities /Student Driven . (in brief)	Additional Strategies, Global, & SDG Connects	Resources, Worksheets & video links (Specify the requirements)
Day 1 & 2	Error Analysis	NA	Students will identify, analyse and correct their errors, improving accuracy and understanding of mathematical concepts.	NA	NA	NA	NA	NA
Day 3 Chapter 6 Decimals	Like and Unlike Decimals	Identifying like and unlike decimals; comparing the number of decimal places; converting unlike decimals into like decimals by adding zeros	Students will identify and differentiate between like and unlike decimals. Students will convert unlike decimals into like decimals by adding zeros.	Understand & Apply	Riya says that 3.5 and 3.50 are unlike decimals because they have different numbers of digits. Do you agree? Explain your answer and write one more example.	Student-Driven Activity – “Decimal Detectives” Students work in pairs to sort, compare and order decimal cards based on real-life situations such as prices, weights and lengths. They discuss their answers, justify their comparisons, and create their own decimal challenge for another pair to solve.	SDG 12 – Responsible Consumption & Production: Use decimals to compare quantities, costs and measurements to reduce wastage and promote responsible use of resources.	Decimal cards, place-value chart
Day 4	Converting Fractions into Decimals and Decimals into Fractions	Converting fractions with denominators 10, 100 and 1000 into decimals; converting decimals into fractions; simplifying fractions	Students will convert fractions into decimals using place-value knowledge. Students will convert decimals into equivalent fractions and simplify them.	Apply	Arun says that $0.45 = 45/10$. Do you agree? Explain your answer and write the correct fraction in simplest form.			
Day 5	Comparison of Decimals	Comparing decimals using place value; using $>$, $<$ and $=$; comparing decimals with different numbers of decimal places; ordering decimals	Students will compare decimal numbers using place-value knowledge. Students will arrange decimal numbers in ascending and descending order.	Apply Analyse	Ravi says that $2.5 < 2.45$ because 5 is smaller than 45. Do you agree? Explain your answer using a place-value chart.			

Details of students who need special attention: 9 (Hamshika,Antarikish,Krishna, Thakshun, Praneeth,)Mahil Mathi bala,Mahila Mithra,Lakshana,Tholkappian				Modified classroom setup for students requiring special care: NA		
Teacher notes influencing learners or sessions: Use real-life examples and place-value charts to help students compare decimals. Encourage students to explain and justify their answers rather than relying only on rules.				Reflection: Students were able to add, subtract, multiply and divide fractions using appropriate strategies. Most students showed understanding of the concepts, while some needed additional practice in simplifying answers and solving application-based word problems .
