QMIS ERP — Teammate Handoff: Leftover Ops Panels + Cursor Prompt

Document date: 20 October 2026

Audience: Teammate developers finishing panels **not** covered in the completed journey

Repo: `ERP-dev`

Companion tester PDF: `QMIS-ERP-■Tester-Journey-■Flow-20oct.■pdf`

1. What is already done (do not regress)

Your teammate completed and handed to testers:

1. **User creation policy**

- Admin RBAC User Creation → operational staff roles only (Principal, PRM, Teacher, Coordinator, Librarian, Gate roles, Transport Manager, Driver, Canteen/IT/Stationery/HK managers).
- **Not** Admin-creatable: Admin, Super Admin, HR, Account Head, Student, Parent, JD family, auditors.
- Preferred production path: **HR** Job → Candidate → Offer Accepted (temp password).
- Parent/Student: **PRM Enroll**.
- TM Driver Management = **view only** (no login create).

2. **Academic linked flow**

Admin masters → PRM Enroll → HR Teacher → Principal allocation/timetable → Teacher attendance/LP/marks → Coordinator/Director → Parent/Student views.

3. **Finance**

Fee structures, Transport Fee + Class=All + route amounts, Fee Collection, Academic vs Transport Payment split (`feeScope`), live dashboard (no Metro Supplies seed in API mode).

4. **Transport Manager (live campus ops)**

Vehicles, drivers list, routes (fees at route level only; stops = location/time), student transport → finance transport fee, service centers CRUD, maintenance → TM approvals → Principal approvals → expenses + finance, Transport Expenses (fuel/service/other), budget from `transport-budget-requests` + live expense sums, Parent/Student Track Bus + ProTrack (admin fallback).

Read: `reports/■QMIS-ERP-■Tester-Journey-■Flow-20oct.■md` (tester pack) and this file.

2. Your job — leftover panels

Wire each area like Transport: campus ops hydrate/save, **no demo seed in API mode**, empty states when empty, cross-role reflect.

Priority	Area	Roles	Collections / notes
A	Driver portal	Driver	Same `transport-*` TM writes; leave → TM/Principal
B	Gate	Gate Keeper, Gate Keeper Manager	`gate-*`; PRM passes must appear
C	Library	Librarian	`library-*`; Parent/Student borrowed books
D	Canteen	Canteen Manager	`canteen-*`
E	IT Support	IT Support Manager	`it-*`
F	Stationery	Stationery Store Manager	`stationery-*`
G	Housekeeping	Housekeeping Manager	`hk-*`
H	JD / Audit	JD, JDA, JD Audit, Process/Quality Auditor	`jd-*` + campus-audit

After each area, add a short tester checklist to:

`reports/■QMIS-ERP-■Leftover-■Ops-Panels-■Flow-Testing-■Report.md` (create if missing).

3. Code patterns to follow

- `src/services/■campusJsonStore.■js` + `campusCollectionRegistry.■js`
- `backend/■app/services/■ops_collections.■py` (writers/readers)
- Transport pattern: `src/Pages/■TransportManager/■transportCampus.■js` — API mode must **not** inject demo seed
- Toast api vs local; hard-refresh safe; small focused diffs

Do not: add Admin/TM “create driver login” unless product asks; invent parallel localStorage SoTs; drive-by refactors.

4. Cursor Agent prompt (copy everything below)

Open a **new Cursor Agent chat** on the `ERP-dev` workspace and paste:

```
You are continuing QMIS ERP campus wiring in this repo (ERP-dev).

CONTEXT — already completed and signed for testing (do NOT regress):
1) User creation policy: Admin RBAC User Creation can create operational staff roles (Principal, PRM, Teacher,
Coordinator, Librarian, Gate roles, Transport Manager, Driver, Canteen/IT/Stationery/HK managers). Privileged
roles (Admin, Super Admin, HR, Account Head, Student, Parent, JD family, auditors) are NOT Admin-creatable.
Preferred production path: HR Job→Candidate→Offer Accepted creates staff logins + temp password; PRM Enroll
creates Parent/Student. Transport Manager Driver Management is VIEW ONLY — no driver account create.
2) Academic linked flow: Admin masters → PRM Enroll → HR Teacher → Principal allocation/timetable → Teacher
attendance/LP/marks → Coordinator/Director approvals → Parent/Student views.
3) Finance: Account Head fee structures, Transport Fee + Class=All + route amounts, Fee Collection,
Parent/Student Academic vs Transport Payment split (feeScope), dashboard live KPIs/collections/expenses (no
Metro Supplies seed in API mode).
4) Transport Manager live ops: vehicles, drivers list, routes (fees at route level only; stops =
location/time), student transport enrollment → finance transport fee bridge, service centers CRUD, vehicle
maintenance → TM Request Approvals → Principal Transport Approvals → transport-expenses + finance
maintenance, Transport Expenses fuel/service/other to campus ops, budget overview from
transport-budget-requests + live expense sums (no demo ■4.2L/■4.8L), Parent/Student Track Bus from enrollment
+ ProTrack with admin fallback.

READ FIRST:
- reports/QMIS-ERP-Teammate-Leftover-Ops-Prompt-20oct.md
- reports/QMIS-ERP-Tester-Journey-Flow-20oct.md
- reports/QMIS-ERP-Linked-Module-Flow-Test-Guide.md
- backend/app/services/ops_collections.py (writers/readers per collection prefix)
- src/services/campusJsonStore.js + campusCollectionRegistry.js
- src/Pages/TransportManager/transportCampus.js (API mode must NOT inject demo seed)

YOUR JOB — leftover panels, same patterns as Transport:
Wire each remaining ops area to campus API (hydrate/save via ops collections), stop demo seed in API mode,
cross-link roles, and keep UI empty-state when no data.

Priority order:
A) Driver portal — duties/attendance/docs must read same transport-* collections TM writes; leave to
TM/Principal received leave.
B) Gate Keeper + Gate Keeper Manager — gate-* collections; PRM gate passes must appear on Gate lists.
C) Librarian — library-* ; issue to enrolled student; Parent/Student borrowed books.
D) Canteen Manager — canteen-* menu/inventory/orders/requests.
E) IT Support Manager — it-* assets/tickets/requests.
F) Stationery Store Manager — stationery-*.
G) Housekeeping Manager — hk-*.
H) Joint Director / Assistant / Audit chain — jd-* and campus-audit collections; do not invent parallel
localStorage SoTs.

RULES:
- Match existing Transport/Finance patterns: getTransportRows-style helpers, hydrateFromApi,
persistCampusJson, toast api vs local, hard-refresh safe.
- In API mode never ensureCampusSeed demo rows into DB.
- Do not add Admin/TM “create driver login” unless product asks; HR/Admin User Creation remains account source.
- After each area, add a short tester checklist (Who → Screen → Action → Reflects on) into
reports/QMIS-ERP-Leftover-Ops-Panels-Flow-Testing-Report.md (create that file).
- Prefer small focused diffs; no drive-by refactors; no new markdown except the leftover test report and
necessary code comments.
- Run/fix against local ./run-local.sh API when possible.

Start by auditing which leftover sidebars still use static arrays vs campusJsonStore, then implement Driver +
Gate first end-to-end, then Library, then stores (Canteen/IT/Stationery/HK), then JD/Audit.
```

5. Suggested delivery order for you

1. Paste §4 prompt into Cursor → audit leftovers.

2. Ship **Driver + Gate** with a short tester checklist.

3. Ship **Library**, then **Canteen / IT / Stationery / HK**.

4. Ship **JD / Audit**.

5. Update `QMIS-ERP-■Leftover-■Ops-Panels-■Flow-Testing-■Report.md` continuously so testers can start without waiting for all areas.

End of Teammate Handoff — 20 Oct 2026.
