

DAILY WORK REPORT

9 October 2026

Queen Mira International School ERP · HR department · Manager update

Status. HR workflow is in the API and on the HR screens. Module tests passed. One screen compile error was fixed the same day.

Done today

- Staff are created only by HR. Saving the profile creates the login, issues a temporary password, and forces a password change on first login. The role comes from the fixed role list.
- After a profile is saved, name and salary cannot be rewritten. A later change is a department or role transfer, and the previous assignment stays in history. Salary and designation change only when an increment is marked Applied.
- Visibility follows the document: HR and MD see all staff, a department head sees their department, and any other staff login sees only their own profile.
- Approved leave writes attendance as Leave. A permission request writes attendance as Permission. Leave balance is the yearly entitlement minus approved days.
- A paid payroll month, an applied increment, and an approved disciplinary record stay locked. A completed exit deactivates the login and keeps the history.
- Claims and incentives are stored: extra work time, admission referral, and staff joining referral.
- The Employees list screen was broken by a missing closing brace on the employment-type field. That is fixed, and the page compiles again. Adding a person shows the full form. An existing person opens Transfer, which changes only department, role, and reporting head.

Test result

27 automated tests passed in about 10 seconds. The module-by-module detail is in the HR testing report.

Still open

These items in the HR document depend on other systems and are not part of this HR build.

- RFID device punches
- A real email server. The temporary password is returned for local testing.
- Finance paying payroll and applying the staff-child concession on the fee
- Academics reassigning periods when a teacher takes emergency leave
- Click-through of every HR screen in the browser

How to see it

- HR screens: open the school portal, then open HR.
- API tests: from the backend folder, run `python -m pytest tests/test_hr_modules.py tests/test_hr.py tests/test_phase0.py -v`
